## ADOPTION OF SCIENCEWORD AS A NEW OFFICIAL WORD PROCESSOR

ScienceWord is an outstanding software for word processing, with unequalled features long awaited by the Scientific community. This software greatly facilitates the processing and the publication of scientific documents of all types, incorporating straight forward implementation of Mathematical formulae, geometrical constructions, chemical, biochemical and pharmacological structures in both 2D and 3D as well as graphs of functions on provision of data or analytic expressions. Arithmetic manipulations such as long divisions in a format usable by basic school pupils are also available. In line with Senior High School and Tertiary level Curricula, scientific apparatus drawings for physics, chemistry and biology experiments together with circuit diagrams which are indispensable for electrical and electronics documentation are also efficiently dealt with. ScienceWord is indeed a new technological paradigm that introduces a simple way of typing complex scientific documents. I am happy to recommend its use by all GSA authors. ScienceWord documents will henceforth be accepted by our journal as a format in which papers can be presented for publication.
